# Sumário

- 1 Problematização
- 2 Proposta
- 3 Desenvolvimento
- 4 Problemas encontrados
- 5 Tecnologias utilizadas
- 6 Documentação

# Problematização

- Crescimento do uso do *e-commerce*;
  - Facilidade de pesquisa;
  - Comodidade;
  - Praticidade;
- Comércio varejista local não utiliza esse recurso totalmente.

# Proposta

- Um sistema que permita que o consumidor e os estabelecimentos cadastrados tenham uma rápida interação;
  - O SmartList permite que o consumidor crie listas de compras, utilizando informações fornecidas pelos estabelecimentos;
  - O consumidor pode fazer uma pesquisa dos estabelecimentos cadastrados na região sem sair de casa.
  - Os estabelecimentos podem alcançar potenciais consumidores novos, e economizar com propaganda física (papeis, cartazes, etc).

# Desenvolvimento

- Baseado no processo iterativo
  - A cada iteração, era feita uma revisão do que foi feito para evitar possíveis inconformidades;
  - Possibilitou novas ideias e mudanças durante o desenvolvimento, ou a refatoração/remoção das mesmas;
  - O sistema Redmine foi utilizado para gestão das horas trabalhadas.

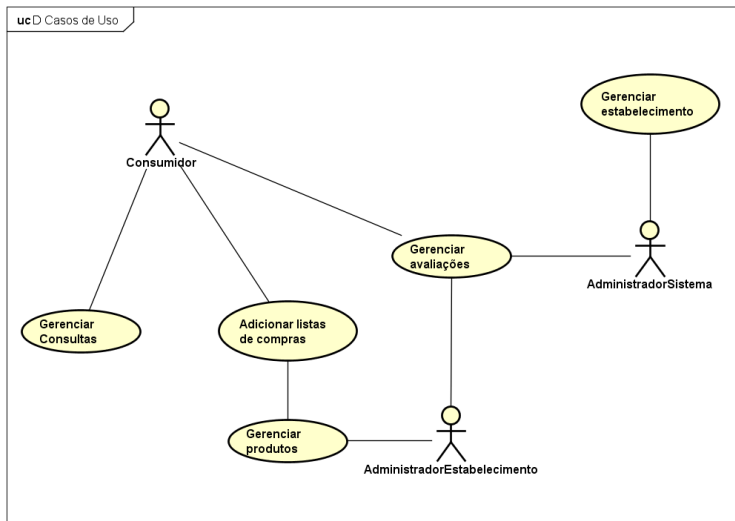

# Problemas encontrados

- Localização dos membros do grupo e horário;
- Mudança de *design pattern* e *frameworks* durante o desenvolvimento;
- Requisitos definidos incompatíveis com o tempo disponível;
- Não-conformidade na primeira entrega da documentação.

# Tecnologias utilizadas

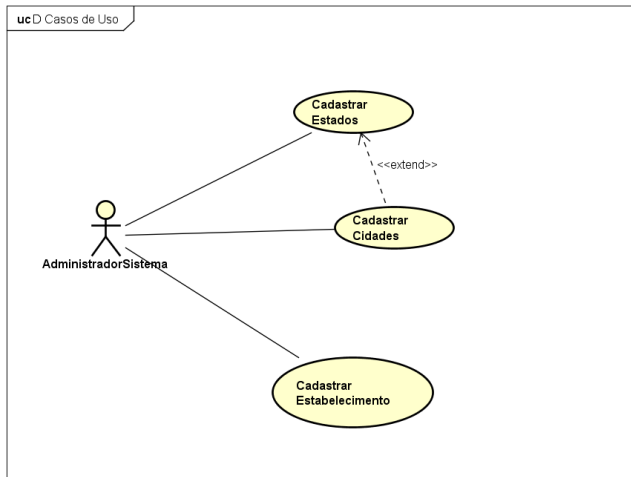

- Linguagem: Java
- Frameworks: JSP (JavaServer Pages) e Servlets
- IDE: NetBeans
- Servidor web local: GlassFish
